

EUROCONTROL ETS Contract Office

EU ETS (SET) and CORSIA (CERT) fuel burn data collection

The EUROCONTROL Small Emitter Tool (SET) , and the CORSIA CO₂ Estimator and Reporting Tool (CERT) require a regular calibration to provide Aircraft Operators with the most accurate emission data estimation (on a flight by flight basis but also for the total estimated CO₂ to be reported).

The fuel and emissions estimation algorithms that run in the background of the SET and the CERT are regularly updated using fuel burn samples from real operations provided on a voluntary basis by Aircraft Operators.

This “fuel burn data collection” is launched by EUROCONTROL on a yearly basis to gather fuel burn data from volunteer aircraft operators for both ETS and CORSIA.

Should you be interested in contributing to a better modelling of your aircraft types , you are invited to contact antonio.astorino@eurocontrol.int who will provide you with further guidance and information.

More information and access to the EU ETS Support Facility is available through our [website](#)
